PYQ PATTERN · COMPUTATIONAL THINKING

How many cards pass this filter?

A favourite Qualifier pattern. Answer on slide 3.

CT · FILTERING

Your turn

In the Scores dataset, 14 students are female, 12 are from Chennai, and 5 are female and from Chennai. How many cards pass:
X.Gender == "F" or X.CityTown == "Chennai"

A 26

B 21

C 31

D 5

Comment your answer, then swipe.

ANSWER

B. 21

1. 'or' means at least one condition is true.
2. count(A or B) = count(A) + count(B) – count(A and B).
3. 14 + 12 – 5 = 21.

⚠ 26 counts the 5 female students from Chennai twice. 5 is the answer for 'and', not 'or'.
